

Elite Assembly Instructions

These instructions cover a wide range of layouts. This install may not contain all the elements shown. Use the layout provided for the install. **All screws/bolts should be tightened until snug, do not overtighten!**

Place Equipment/Cabinetry

Place all equipment and cabinetry in place according to the layout ordered. Since the coolers are typically the heaviest part of the bank, putting them in their final location is most helpful. Assuming the location of everything is correct, the coolers will act as anchors for setting up the cabinetry. If the layout involves a corner, start setting up cabinets and equipment at the corner and work out in each direction. A typical layout may include the following:

- a kiosk cabinet
- a snack cabinet
- a coffee cabinet
- panels that are labeled for placement
- headers for cooler sections

Assembly

The diagrams that follow show a variety of setup connections. Use the correct size connector bolts and the 1/4" sleeves to connect the cabinets, panels, and headers together as shown.

2 - Cooler Header to Panel to Cooler Header Connection Example

3 - Cooler Header to Cabinet Connection Example

These sections will be large and heavy, so use caution and assistance to push the combined sections against the wall. Be sure to keep the panels from buckling while moving.

As a last step of any installation, please ensure all panels, cabinets, and coolers are braced securely. We strive to include all necessary instructions and hardware, but it is the responsibility of the installer to ensure the cabinetry has been secured properly.
